Springer. Hardcover. Book Condition: New. Hardcover. 319 pages. Dimensions: 9.6in. x 6.5in. x 1.0in. During a meeting in Toronto last winter, Mike Jenkins, Bob Bernecky and I were discussing how the two existing theories on arrays influenced or were influenced by programming languages and systems. Mores Army Theory was the basis for NIAL and APL2 and Mullins A Mathematics of A rmys(MOA) , is being used as an algebra of arrays in functional and A-calculus based programming languages. MOA was influenced by Iversons initial and extended algebra, the foundations for APL and J respectively. We discussed that there is a lot of interest in the Computer Science and Engineering communities concerning formal methods for languages that could support massively parallel operations in scientific computing, a back-to-roots interest for both Mike and myself. Languages for this domain can no longer be informally developed since it is necessary to map languages easily to many multiprocessor architectures. Software systems intended for parallel computation require a formal basis so that modifications can be done with relative ease while ensuring integrity in design. List based languages are profiting from theoretical foundations such as the Bird-Meertens formalism. Their theory has been successfully used to describe list based parallel algorithms across many classes of architectures. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Hardcover.
