

Estimates of Tracer-Based Piston-Flow Ages of Groundwater from Selected Sites: National Water-Quality Assessment Program, 2006-2010: Usgs Scientific Investigations Report 2012-5141 (Paperback)

Filesize: 4.19 MB

Reviews

This sort of publication is everything and made me seeking forward and much more. Better then never, though i am quite late in start reading this one. I am easily could possibly get a delight of reading through a created pdf.

(Quinton Balistreri)

ESTIMATES OF TRACER-BASED PISTON-FLOW AGES OF GROUNDWATER FROM SELECTED SITES: NATIONAL WATER-QUALITY ASSESSMENT PROGRAM, 2006-2010: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5141 (PAPERBACK)

To get **Estimates of Tracer-Based Piston-Flow Ages of Groundwater from Selected Sites: National Water-Quality Assessment Program, 2006-2010: Usgs Scientific Investigations Report 2012-5141 (Paperback)** eBook, you should refer to the link below and download the file or have access to additional information which are related to **ESTIMATES OF TRACER-BASED PISTON-FLOW AGES OF GROUNDWATER FROM SELECTED SITES: NATIONAL WATER-QUALITY ASSESSMENT PROGRAM, 2006-2010: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5141 (PAPERBACK)** book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.Piston-flow age dates were interpreted from measured concentrations of environmental tracers from 812 National Water-Quality Assessment (NAWQA) Program groundwater sites from 27 Study Units across the United States. The tracers of interest include chlorofluorocarbons (CFCs), sulfur hexafluoride (SF₆), and tritium/helium-3 (3H/3He). Tracer data compiled for this analysis were collected from 2006 to 2010 from groundwater wells in NAWQA studies, including: * Land-Use Studies (LUS, shallow wells, usually monitoring wells, located in recharge areas under dominant land-use settings), * Major-Aquifer Studies (MAS, wells, usually domestic supply wells, located in principal aquifers and representing the shallow drinking water supply), * Flow System Studies (FSS, networks of clustered wells located along a flowpath extending from a recharge zone to a discharge zone, preferably a shallow stream) associated with Land-Use Studies, and * Reference wells (wells representing groundwater minimally impacted by anthropogenic activities) also associated with Land-Use Studies. Tracer data were evaluated using documented methods and are presented as aqueous concentrations, equivalent atmospheric concentrations (for CFCs and SF₆), and tracer-based piston-flow ages. Selected ancillary data, such as redox data, well-construction data, and major dissolved-gas (N₂, O₂, Ar, CH₄, and CO₂) data, also are presented. Recharge temperature was inferred using climate data (approximated by mean annual air temperature plus 1 C [MAAT +1 C]) as well as major dissolved-gas data (N₂-Ar-based) where available. The N₂-Ar-based temperatures showed significantly more variation than the climate-based data, as well as the effects of denitrification and degassing resulting from reducing conditions. The N₂-Ar-based temperatures were colder than the climate-based temperatures in networks where recharge was limited to the winter months when evapotranspiration was reduced. The tracer-based piston-flow ages compiled in this report are provided as a consistent...
